Professional archaeology: a guide for clients

Sustainable futures: archaeology and social value

This guide is for anyone who needs to commission archaeology. It explains what you need to do and why you need a professional archaeologist to help you through the process. It also provides some recent case studies as examples. This guide will help you increase the benefits from your archaeological work and avoid some of the possible hazards.

Involving professional archaeologists early in your project will help you

- plan the archaeological elements of your project to add value
- assess the timetable and resource requirements
- ensure you have the right skills in place to interpret and fulfil your obligations

You can find a copy of this guide, along with further information on CIfA's website at www.archaeologists.net.

Magnitude Surveys

Independent
Archaeological
Geophysics

Weaving the fabric
of innovation in
archaeological
geophysics

- Offer a full suite of geophysical and remote sensing survey techniques across the UK
- We design, manufacture and utilise our own bespoke geophysical systems and software
