

## S U M M A R Y

The Institute for Museum Research (Staatliche Museen zu Berlin – Preußischer Kulturbesitz) reports annually on visitor attendance in all museums in the Federal Republic of Germany (FRG).

The Government – both Federal and at the level of the 16 „Länder“ (Federal State Countries) –, as well as regional and local political bodies and cultural organizations in Germany are regarding these statistics as their most comprehensive instrument in this field.

This publication documents the 2017 statistical survey for all German museums.

The total number of museums taken into account for the 2017 survey was 6.771. The figure of 6.771 museums remains after the data of some museums have been combined (from the point of view of feasibility of counting visits) into one figure, and after leaving out some 100 from the survey which were known to be closed during all of 2017.

While the Institute for Museum Research uses an operational definition of „museum“ to enable precise counts, it is not decreeing in any way which institutions are museums and which are not. Such decision, where required, pertains to the regional organizations of museums in the Länder of Germany; as a consequence of the political structure of Germany which is federal. Which museums are taken into account for the annual statistics and registered in our data base, however, will normally follow those decisions taken locally.

The quota of returned questionnaires for 2017 is 77,5 %.

### **Museum attendance in 2017:**

The total number of visits counted in museums in Germany was

**114.375.732.**

Of the 6.771 museums which were asked for their attendance data, 4.831 were able to report them (71,4 %). The number of visits given above also includes attendance in special exhibitions held in museums or organized by them. Since different methods of counting are used in different museums, this figure includes also some estimated data.

8.765 special exhibitions were reported by 2.872 museums in 2017. No complete survey of all visits to special exhibitions is possible since not all museums are able to count them separately from the visits to their permanent exhibitions. Therefore, in order to avoid misinterpretations, no attendance figures are being given for special exhibitions. As already mentioned, the figure of 8.765 exhibitions does **not** include neither exhibition halls (see below) nor 'Verkaufsgalerien' (sales galleries), and/or exhibitions not intended for a general public.

As compared to the preceding year, more museums were able to report temporary exhibitions for 2017.

As compared to 2016, the total figure of museum attendance for 2017 shows that visits in German museums in that year have increased by about 2,5 mio.

Table 5 on page 22 shows that 74,6 % of all museums listed reported up to 15.000 visits in 2017.

Out of 8.765 special exhibitions of 2.872 museums, a number of 8.424 were held in the respective museum itself.

Altogether, 1.122 museums have replied to our question about **marked increases or decreases of attendance figures** in their relative institutions.

For 1.227 museums (574 with reasons named), the attendance figures had significantly increased in 2017 as compared to the preceding year. Main reasons stated were important special exhibitions, increased public relations work or educational activities in museums and special events.

548 museums named reasons for a significant decrease of the attendance figures in 2017 as compared to the preceding year. The reasons included less number of groups, less attractive (less important) temporary exhibitions and construction works.

A listing of causes for significant increases or decreases in attendance in the museums for 2017 as to 2016 can be found in table 2 on page 19.

Apart from this, **museum-related exhibitions** are often shown or organized by institutions which do not have own collections. Therefore, the Institute for Museum Research (IfM) within its statistics for 2017 has asked 477 further institutions (exhibition halls) which are organizing museum-type special exhibitions for their attendance figures. These institutions have organized 1.871 temporary exhibitions in which

**6.901.250** visits

were counted.

Also in 2017, visiting a museum belonged to the less expensive cultural activities for the German consumer; there are, however, differences between the former states of West-Germany and East-German states. In former West Germany, in 40,0 % (1.416) of museums which have answered this question no entrance fee was asked at all, in the „Länder“ of former East Germany 17,9 % (185) were free of charge (see table 19 on page 43 which summarizes our findings on conditions of the museum visit).

Already in 1987 the Institute for Museum Research had modified its own classification system for museums and is now very near to the categories employed by UNESCO (cf. UNESCO/STC/Q/853).

Altogether we have now the following **classification**:

1. Local history, local ethnography and regional museums
2. Art museums
3. Castles with inventory
4. Natural history and natural science museums
5. Science and technology museums
6. Archaeology and history museums
7. Complex museums with different kinds of collections
8. Specialized museums
9. Museum complexes with different kinds of museums

Due to the particular museum structure in the FRG, ethnography and anthropology museums (UNESCO 2.e) and regional museums (UNESCO 2.g) have to remain in class no. 1. Contrary to UNESCO and ICOM usage, zoological and botanical gardens as well as monuments and sites without inventory are **not** included in our survey.

Furthermore, the classification does not cover: purely commercial exhibits of private and state industry, industry fairs, and churches.

Table 6 on page 26 shows the variations in attendance as correlated with the different types of museums: Item no. (1), museums for local history and local ethnography (2.940 museums), have counted about 14,6 million visits in 2017, (2) art museums (all in all 719) have counted about 20,6 million visits.

Table 4 on page 21 and table 7 on page 29 show the variation in attendance figures according to these different types of museums.

Table 12 on page 35 shows the distribution of museum types and their visitor attendance in the individual Federal Countries (Bundesländer).

In order to achieve a better compatibility with other statistical data and inquiries, especially with those of Deutscher Städtetag, we allot since 1992 the museums also to a further

classification, one of administrative jurisdiction; by this method, a clearer picture of private or public maintenance of museums is achieved. Table 14 shows the distribution of museums onto this classification. It shows that about 51 % of museums (3.479) are under public administration, 44,8 % of museums are privately operated, and 3,8 % have a mixed (public and private) governing board.

Along with our regular annual questions regarding attendance figures and conditions of visits in museums, we ask varied questions every year.

For 2017, we asked again for information on educational activities in museums (former statistical surveys on educational activities collected data for the years 2007, 1997, 1992 and 1987). Of 5.249 museums returning the questionnaires, about 75,9 % reported to be busy on educational activities.

3.745 museums reported their type of educational activities (see tables 37, page 60). 1.437 permanent employees were reported: 739 on full-time basis, 698 persons work half-time (see tables 32, page 55 and 33, page 56).
