Most placenames had been collected during a field campaign in 2008. Others had been taken from existing maps. The contour lines are derived from a digital elevation model (DEM) with a resolution of 90 m. Further mappings are based on Quickbird satellite images from 2003, 2007 and 2013 with a resolution of 2.4 m and Landsat-7 images from 2000 with 15 m resolution.
